Q1. Food Delivery Billing System (Multiple Inheritance using Two Interfaces)

Score: 10.00 TC: 3/3 passed

CODE

```
import java.util.Scanner;
interface DeliveryCharge {
    double calculateDeliveryCharge(double foodCost);
}
interface CouponDiscount{
    double calculateDiscount(double foodCost,String couponCode);
}
class FoodOrder implements DeliveryCharge,CouponDiscount {
    public double foodCost;
    public double calculateDeliveryCharge(double foodCost){
        if(foodCost >= 500)
            return 0.0;
        else
            return 50.0;
    }
    public double calculateDiscount(double foodCost, String couponCode){
        if(couponCode.equals("SAVE10"))
            return foodCost*0.10;
        else
            return 0.0;
    }
    public void displayDetails(double foodCost, String couponCode){
        double deliveryCharge = calculateDeliveryCharge(foodCost);
        double discount = calculateDiscount(foodCost,couponCode);
        double finalBill = foodCost + deliveryCharge - discount;
        System.out.println("Food Cost : " + foodCost);
        System.out.println("Delivery Charge : " + deliveryCharge);
        System.out.println("Discount : " + discount);
        System.out.println("Final Bill : " + finalBill);
    }
    public static void main(String[] args){
        Scanner sc = new Scanner(System.in);
        double foodCost = sc.nextDouble();
        sc.nextLine();
        String couponCode = sc.nextLine();
        FoodOrder obj = new FoodOrder();
        obj.displayDetails(foodCost,couponCode);
        sc.close();
    }
}
```

INPUT

600
SAVE10

OUTPUT

Food Cost : 600.0
Delivery Charge : 0.0
Discount : 60.0
Final Bill : 540.0

Q2. Hotel Billing System (Multiple Inheritance using One Class and One Interface)

Score: 10.00 TC: 3/3 passed

CODE

```
import java.util.Scanner;
class Main {
    public static void main(String[] args)
    {
        Scanner in = new Scanner(System.in);
        HotelBill h = new HotelBill();
        h.Room_number=in.nextInt();
        in.nextLine();
        h.Name=in.nextLine();
        h.Rent=in.nextDouble();
        h.calculateServiceCharge();
        h.finalbill();
        h.display();
    }
}
class Room {
    public int Room_number;
    public String Name;
    public double Rent;
}
interface Service_Charge {
    public double calculateServiceCharge();
}
class HotelBill extends Room implements Service_Charge{
    public double final_bill;
    public double ServiceCharge;
    public double calculateServiceCharge() {
        if(Rent >=5000) {
            ServiceCharge=Rent*0.12;
        }
        else{
            ServiceCharge=Rent*0.08;
        }
        return ServiceCharge;
    }
    public void finalbill() {
        final_bill=ServiceCharge+Rent;
    }
    void display() {
        System.out.println("Room Number : "+Room_number);
        System.out.println("Guest Name : "+Name);
        System.out.println("Room Rent : "+Rent);
        System.out.println("Service Charge : "+ServiceCharge);
        System.out.println("Final Bill : "+final_bill);
    }
}
```

INPUT

205
Ananya
6000

OUTPUT

Room Number : 205
Guest Name : Ananya
Room Rent : 6000.0
Service Charge : 720.0
Final Bill : 6720.0
